TITLE : PORTABLE COMMUNICATION
SYSTEM

ABSTRACT : PURPOSE: To keep the accuracy of a time indicated by a clock function in a portable telephone terminal or a private base station.

CONSTITUTION: A portable telephone set A and a master set C store respectively by which of clock information sent from a public base station B and the master set C a time indicated by its own clock function is corrected and corrected date and time. Then the portable telephone set A corrects the time indicated by its own clock function based on the time information sent from the public base station B in a radio area of the public base station B. The portable telephone set A corrects the time of its own clock function based on the time information of the master set C in the radio area of the master set C when the corrected date and time of the master set C is newer than that of its own corrected date and time. When the corrected date and time of the portable telephone set A is newer than the corrected date and time of itself, the master set C corrects the time indicated by its own based on the time information of the portable telephone set A.
